SUMMARY

Backend-focused software engineer with 2+ years of experience in banking and finance, specializing in scalable APIs, backend integrations, and automation. Adept at secure coding, TDD, and collaborating across departments to deliver reliable, maintainable systems.

EDUCATION

UNIVERSITAS SURABAYA — Bachelor of Informatics Engineering

2017–2023 | GPA: 3.306 / 4.00.

Thesis: *Manpower Website Creation for the West Waringin City Manpower Office.*

TECHNICAL SKILLS

- **Language & Frameworks:** Java (Spring Boot), C# (.NET Core/Framework), Python, Node.js, PHP (Laravel), Kotlin.
- **Architecture:** Microservices, Monolithic, Event-Driven, RESTful APIs.
- **Development Practices:** Secure Coding, Test-Driven Development (TDD), Code Review, API Monitoring & Profiling.
- **Databases:** SQL Server, Oracle, PostgreSQL, MySQL, MongoDB, Redis.
- **Tools & DevOps:** GitLab, Jenkins, Docker, Kubernetes, Visual Studio, Postman, JIRA.
- **Messaging & File Transfer:** SFTP, SMB, AWS S3 / ECS, basic understanding of event-driven patterns (Kafka, RabbitMQ, Redis Pub/Sub).

EXPERIENCE

BCA Syariah – Jakarta, Indonesia

Assistant Officer IT Management Application (Dec 2024 – Jun 2025)

- Developed and maintained internal banking applications using .NET Core 9, Java Spring, and PHP in a monolithic architecture.
- Designed and managed relational databases (SQL Server, MySQL), with data integration from PostgreSQL (AWS-hosted core banking system) and Oracle (legacy).
- Built and scheduled automated tasks using stored procedures to handle data synchronization and business logic execution.
- Collaborated with cross-functional teams (Business Analysts, DBA, Core System, Infrastructure, Cyber Security) to define scope and ensure compliance.
- Delivered full-cycle development: requirements analysis, UAT coordination, production deployment, and post-deployment support.
- Led code reviews and mentored junior team members, demonstrating strong time management and leadership in delivery.
- Diagnosed and resolved integration issues using root cause analysis across multiple systems and environments.

KPSG Group – Bandung, Indonesia

Outsource Full-Stack Developer for PT Bank Central Asia (Jun 2023 – Dec 2024)

- Worked closely with business users to translate requirements into technical solutions, maintaining clear communication and expectations across stakeholders.
- Designed responsive front-end interfaces using HTML, CSS, JavaScript (Bootstrap, DataTable.js), and integrated them with backend services.
- Implemented custom task schedulers to automate backend processing and support business logic workflows.
- Created and optimized SQL queries and data models across SQL Server and MySQL.
- Debugged and resolved integration issues, ensuring data consistency between application modules.
- Supported end-to-end delivery including UAT, production deployment, and post-launch monitoring for over 100 features.

PROJECTS

Distributed Report (Distro)

Developed a real-time dashboard system for monitoring and managing financial portfolios across multiple data sources. Integrated data from SQL Server, PostgreSQL, and Oracle to provide unified analytics and reporting. Built RESTful APIs and responsive front-end components to deliver accurate, up-to-date financial insights for internal banking users.

Technologies: Java Spring Boot, .NET Core 9, JavaScript, SQL Server, PostgreSQL, Oracle, REST API.

One Stop Reconciliation (OSR)

Developed a reconciliation system to automate validation of grand master slips, journals, and subledger data between bank and cash accounts. Used SQL Server stored procedures to build schedulers that extracted and mapped subledger data, reducing verification errors by 98% and improving efficiency by 90%.

Technologies: .NET MVC, SQL Server, GitLab, JIRA

IBK-XML (Information and/or Financial Evidence)

Built a scheduler and validation module to automate the extraction and verification of tax-related data from the Data Warehouse for DJP submission. This reduced manual errors by 90% and improved process speed by 95%.

Technologies: .NET MVC, SQL Server, GitLab, JIRA.
