SUMMARY

Backend-focused software engineer with 3 years of experience in the banking industry, delivering 650+ features across monolithic systems, APIs, schedulers, and low-code platforms like OutSystems. Skilled in C#, ASP.NET Core, Entity Framework, SQL Server, and Java, with strong capabilities in database design, system integration, and backend optimization. Experienced in end-to-end delivery — from gathering requirements and collaborating with client-side users, tech leads, and project managers to handling UAT, deployment, and support. Passionate about building scalable, secure, and maintainable systems using clean code, and open to learning new technologies that best solve business problems.

EDUCATION

UNIVERSITAS SURABAYA (2017 - 2023)

Bachelor of Informatics Engineering - GPA 3.306

Thesis Topic - Manpower Website Creation for the West Waringin City Manpower Office

TECHNICAL SKILLS

- Language & Frameworks: C# (.NET MVC/Core), Java (Spring), PHP (Laravel), Low code (Out system), Go (Gin), JavaScript, HTML/CSS, Kotlin, Python.
- Databases: SQL Server, MySQL, Oracle, PostgreSQL.
- Tools & DevOps: Gitlab, Visual Studio, VS Code, JIRA, Postman, IntelliJ, Outsystems Service Studio.
- Platform: Outsystems, IIS, Windows Server.
- Others: RESTful API, Scheduler, Task Automation, Code Review.

SOFT SKILLS

Problem Solving | Communication | Time Management | Critical Thinking | Teamwork

EXPERIENCE

Iforce – Jakarta, Indonesia

.NET Developer (Jul 2025 – Present)

- Developed and maintenance of enterprise-grade client applications using the full .NET ecosystem — including .NET Framework, .NET Core, and .NET 5/6/9 — with a strong focus on backend logic, API design, and system integration.
- Designed and managed relational databases (SQL Server)
- Built and scheduled automated tasks using stored procedures to handle data synchronization and business logic execution.
- Collaborated directly with client-side stakeholders — including business users, tech leads, and project managers to define technical scope, deliver features, and ensure security and compliance.
- Delivered full-cycle development: requirements analysis, UAT coordination, production deployment, and post-deployment support.
- Led code reviews, oversaw vendor integration, and conducted performance testing to ensure system scalability and reliability.

BCA Syariah – Jakarta, Indonesia

Assistant Officer IT Management Application (Dec 2024 – Jun 2025)

- Developed and maintained internal banking applications using .NET Core 9, Java Spring, and PHP in a monolithic architecture.
- Designed and managed relational databases (SQL Server, MySQL), with data integration from PostgreSQL (AWS-hosted core banking system) and Oracle (legacy).
- Built and scheduled automated tasks using stored procedures to handle data synchronization and business logic execution.
- Collaborated with cross-functional teams (Business Analysts, DBA, Core System, Infrastructure, Cyber Security) to define scope, deliver features, and ensure compliance.
- Delivered full-cycle development: requirements analysis, UAT coordination, production deployment, and post-deployment support.
- Led code reviews, oversaw vendor integration, and conducted performance testing to ensure system scalability and reliability.

- Diagnosed and resolved integration issues using root cause analysis across multiple systems and environments.
- KPSG Group – Bandung, Indonesia**
Outsource Full-Stack Developer for PT Bank Central Asia (Jun 2023 – Dec 2024)
- Worked closely with cross-functional teams, including business analysts, business users, and other developers, to understand requirements, define project scope and timeline, and deliver high-quality software solutions on time.
 - Designed responsive front-end interfaces using HTML, CSS, JavaScript (Bootstrap, DataTable.js), and integrated them with backend services.
 - Implemented custom task schedulers to automate backend processing and support business logic workflows.
 - Created and optimized SQL queries and data models across SQL Server and MySQL.
 - Debugged and resolved integration issues, ensuring data consistency between application modules.
 - Participated in UAT, deployment processes, and production performance monitoring.
 - Delivered over 100 features in collaboration with business users, analysts, and fellow developers within tight timelines.

PT Zero One – Surabaya, Indonesia
Web Developer (Jul 2022 - Jan 2023)

- Designed, developed, and deployed custom web applications based on client specifications using PHP, HTML, CSS, and JavaScript.
- Collaborated with senior developers to understand technical requirements and apply architecture best practices.
- Conducted thorough testing and debugging to ensure cross-device and cross-browser compatibility.
- Provided daily progress updates to project managers and weekly presentations to stakeholders.
- Handled client feedback and adjusted deliverables to meet expectations and project goals.

PROJECTS

One Stop Reconciliation (OSR)

Developed a reconciliation system to automate validation of grand master slips, journals, and subledger data between bank and cash accounts. Used SQL Server stored procedures to build schedulers that extracted and mapped subledger data, reducing verification errors by 98% and improving efficiency by 90%.

Technologies: .NET MVC, SQL Server, GitLab, JIRA

IBK-XML (Information and/or Financial Evidence)

Built a scheduler and validation module to automate the extraction and verification of tax-related data from the Data Warehouse for DJP submission. This reduced manual errors by 90% and improved process speed by 95%.

Technologies: .NET MVC, SQL Server, GitLab, JIRA.

PAST (Assistant Journaling)

Problem:
Developed a system to validate journals before posting to the general ledger, using a scheduler to offload verified entries. This minimized inconsistencies and improved verification accuracy and speed by over 90%.

Technologies: Out system, SQL Server, .NET, JIRA.
